

Mapping Local Drive C: Java Client Only

Why can't I see any mapped drives when using the Java Client?

- ❖ The Java client does not automatically map your local drives.

To map drives you need to open the Java ICA Connection Centre and select settings:

Then select the Drive Mapping tab and click on the “Modify” button.

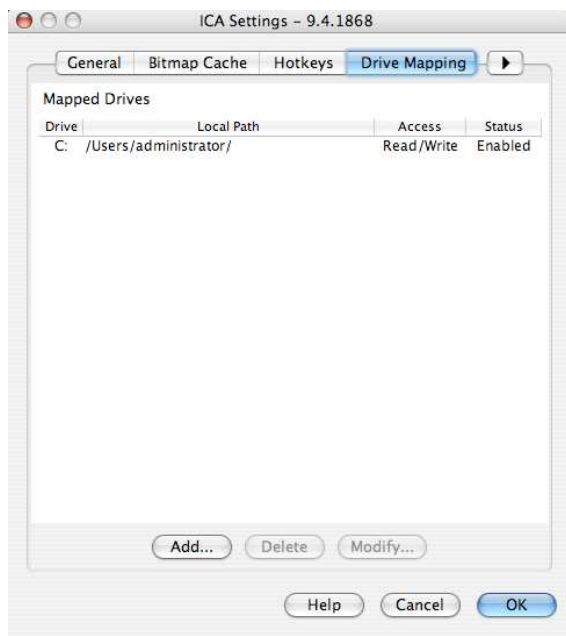

Figure 1: MAC OS

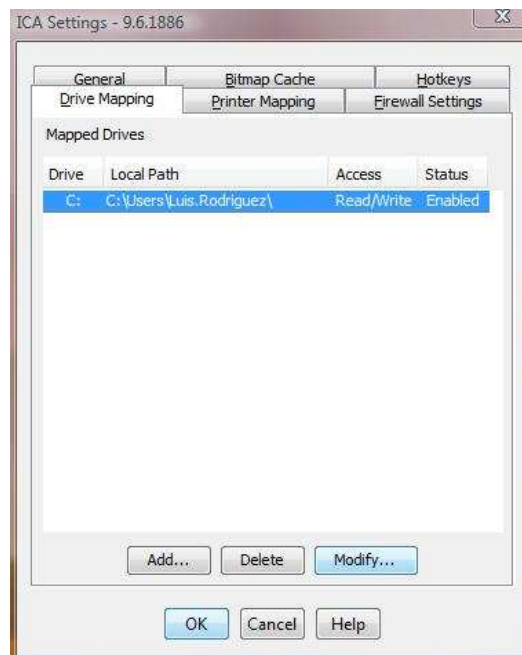

Figure 2: Windows Systems

You can choose the drive letter to which the local drive will be mapped. In most cases this will be drive letter C: is mapped to C:\

Its best to specify Read/Write access otherwise you will not be able to save to the local drives.

For the settings to take effect you need to choose Disconnect from the Java Connection Centre and then logout of the Windows Terminal Service. All future sessions will have the drives mapped.
